TITLE : VIDEO RECORDING MANAGEMENT
DEVICE

ABSTRACT : PURPOSE: To make it possible to deal with the case where two pieces of video recording reservation information overlap on each other in time and to check the video recording reservation information which is already video-recorded by the video recording management device which executes video recording reservation of at least one unit of video tape recorders (hereafter described as VTRs).

CONSTITUTION: A schedule management section 11 functions to cancel at least either of the video recording reservation informations in accordance with an instruction from the outside when the video recording reservation information inputted by a reservation input section 12 and the video recording reservation information stored in a schedule storage section 16 overlap on each other in time. The video recording reservation information inputted by the reservation input section 12 is so handled as the information subjected to video recording reservation by another VTR at the time of executing video-recording reservation to 2 units or more of the VTRs. All of the video recording reservation information stored in the schedule storage section 16 or only the video recording reservation which is already video-recorded is displayed on a display device or is printed by a printer.
